

Videos on BSL-2 enhanced work practices

Personal Protective Equipment (PPE)

Setting up the Biosafety Cabinet (BSC)

Hallmarks & Reminder

Minimize Aerosols Generation

Transport to/from BSC

Waste Collection inside the BSC

Terminal Disinfection Of the BSC

Biosafety Level-2 enhanced is the designation utilized for those biohazard experiments that require practices that are more stringent than standard BSL-2 procedures. Generally, Biosafety Level-3 practices are mandated in a space designed for BSL-2 work. All manipulations with BSL-2 enhanced material are conducted within a Class II biosafety cabinet and secondary containment is utilized for centrifugation and other potential aerosol generating procedures. The following training videos further describe the requirements for work with BSL-2 enhanced experiments.
