

PURCHASING HIGH-SPEED CELL SORTERS

Because of the unique risks associated with high-speed cell sorters, Yale EHS must review and approve their purchase or acquisition prior to obtaining a high-speed cell sorting device. This allows Yale EHS to evaluate the proposed use and review biosafety requirements for the scheduled or potential future work. Yale EHS will also conduct an inspection of the proposed location for the sorter to make sure that the sorter to verify that all other applicable regulations are in place or obtained and check for any issues associated with the proposed area.

Please contact the Yale EHS Biosafety Office if you have any questions regarding your intent to purchase a cell sorter.
