Expectations for Working in Research Laboratories During the COVID-19 Pandemic

This document contains expectations for researchers returning to campus as phased University operations resume (Phase 1 and Phase 2). During these phases, precautionary measures are in place to prevent the spread of COVID-19. For the safety of themselves and those around them, all Yale faculty, trainees, staff, and essential visitors (e.g., contractors, vendors) are expected to comply with these expectations. Failure to do so will result in corrective actions. We thank you for your full cooperation.

The information in this document is intended to be generally applicable to returning to work in a research laboratory on campus. (Training for staff who do not enter laboratory spaces can be found [here.](#) The information provided is in addition to any specific requirements and approvals by other internal review committees, such as the IBC, IRB, YARC, IACUC, Radiation Safety Committee, Laboratory Safety Committee, or Environmental Health & Safety.

In addition to these practices for laboratories, researchers should observe the same precautions in all public spaces, such as parking lots/garages, elevators, stairways, and bathrooms. Consider making common entry and exit points one way. These spaces should be posted with appropriate signage on occupancy and use requirements. Signs are available on the [YPPS website.](#)

Working alone in laboratories is not recommended, although it is recognized that certain tasks under this guidance may need to be performed by someone alone in a laboratory. If it is determined that lab staff will need to work alone, refer to the document, “[Yale University Guidelines for Working Alone in a Laboratory.](#)

The table at the end of this document discusses requirements specific to each phase of research reactivation. Please reference this table for guidance appropriate to Yale’s current phase when you see a # after the guidance below. This # references the row of the table pertaining to the specific guidance.

The expectations discussed below can also be found in the [Reactivation Training for Researchers](#) required of all laboratory staff prior to their return to campus. Ensure all returning employees complete the Return to Work training appropriate for their position.

**Physical Distancing**

- If your work does not require you to be on campus, you are encouraged to conduct your work from home ([#3](#)). If you come to campus, follow all return to work guidance as outlined in this document.
- Maintain appropriate distancing in laboratories ([#5](#)).
  - Use partitions where required distance cannot be maintained.
  - Define and post maximum occupancy limits for any shared spaces. Close and label any shared spaces that do not fit social distancing requirements and are not to be used. Signs are available on the [YPPS website.](#)
- Limit on-campus staff to only those approved for access ([#1](#)), and keep staffing to the minimum necessary to perform the research ([#5](#)). Examples of how to manage staffing levels include:
  - Limit occupancy of any indoor space to 50% normal occupancy (or less as needed to maintain appropriate distancing ([#5](#))).
  - Set up shift scheduling where small groups or cohorts of staff work alternating schedules.
  - Provide time whenever possible between each work shift to minimize overlap and allow for cleaning of the work environment at regular and appropriate intervals.
  - Whenever possible perform non-laboratory work outside of the laboratory (at home).
Restrict laboratory visitors to only essential visitors (e.g., contractors, vendors, custodial, EHS, monitors, etc.). Any visitors to the lab must follow all guidance outlined in this document and follow the applicable Guidance and Requirements for Vendors.

- Group meetings restricted, depending on phase (#5), and should be avoided unless absolutely necessary. Participants must maintain the required distancing (#5) and wear PPE appropriate for common/public spaces (#9) at all times.
- When using break or lunch rooms, alternate break or lunch schedules to reduce the number of employees in the room at any one time, always respecting physical distancing requirements. Eating and drinking is not allowed in laboratories. To avoid potential cross-contamination, use of shared food refrigerators in break rooms is discouraged.
- Set up a scheduling system and disinfection protocol for common equipment/dispensing areas to avoid congregating and cross-contamination in those areas.
- Avoid using coworkers’ phones, desks, offices, or other work tools and equipment. Clean and disinfect before and after each use if sharing such equipment, spaces, furniture, or tools is necessary.
- Where practicable, change work processes to assign specific tasks to the same person to avoid movement across laboratories. Ensure that personnel have the required training if they are performing new tasks.

**Wearing Appropriate PPE**

- Wear a surgical mask or face cover as required for work in a laboratory environment (#8) or in common/public areas (#9).
- In workplace settings where employees are working alone in segregated spaces (i.e., private offices, etc.), employees may remove their face covering.
- Require anybody entering the laboratory to wear a surgical mask.
- Yale University and CT guidance states that face coverings must be worn by anyone in public or in any space that is reasonably expected to be shared, including by employees while in the workplace.
- The requirement for face coverings does not apply to anyone for whom doing so would be contrary to his or her health or safety because of a medical condition. No one will be asked to provide proof of a described medical condition.
- Be aware that face coverings reduce community transmission of the virus and are not intended to provide protection for the wearer. Cloth face coverings provide a physical barrier that can help to contain the spread of respiratory droplets when an infected person coughs, sneezes, or talks.
- For laboratory work, a water-resistant surgical mask is required. Medical grade respirators (N95s or PAPRs) should be reserved for designated workers performing high-risk operations such as healthcare workers, police officers, and workers performing tasks designated high-risk. If performing a high-risk task, contact EHS for a hazard analysis.
- If a medical grade respirator is required for your work, follow the specific approved protocols for your research or contact EHS for assistance.
Practice Strict Self-Hygiene

- Practice good hand-washing: 20 seconds with soap and warm water or with an alcohol-based sanitizer. Avoid touching your face with unwashed hands.
- **Self-monitor and check in daily** as required (#6). Recognize symptoms and self-isolate when sick. Develop a mechanism for recording staff on-site schedules to support contact tracing.
- If you are experiencing symptoms of COVID-19, or suspect you are experiencing symptoms, contact Yale Health at 203-432-7978 or your health care provider for guidance.
- Stay at home whenever possible and in accordance with the work from home requirements (#3).
- Employees who are well, but who have a household member with COVID-19 should notify their supervisor and call the Campus COVID-19 Resource Line at 203-432-6604.

Disinfect High-Touch Surfaces

- Clean and disinfect areas as required in laboratories (#10) and in common/public spaces (#11).
- Clean high-touch surfaces daily in common areas (e.g., tables, hard-backed chairs, doorknobs, light switches, phones, tablets, touch screens, remote controls, keyboards, handles, desks, sinks).
- Use disinfectants appropriate for COVID-19 ([EPA Disinfectant List](#)).
