

Fall Arrest Rescue Plan Form

No fall protection program would be complete without provisions for prompt rescue after a worker has fallen and remains suspended, unable to evacuate to a safe working level. A rescue plan must be developed whenever fall arrest systems are in use and when personnel may not be able to self-rescue should a fall occur. This document is intended to provide guidance for developing site and job-specific rescue plans for working at heights. Note contact information and specific rescue plans for outside support (i.e.: contractors) must be accounted for and attached to this plan.
