

GLOVE REMOVAL EXERCISE

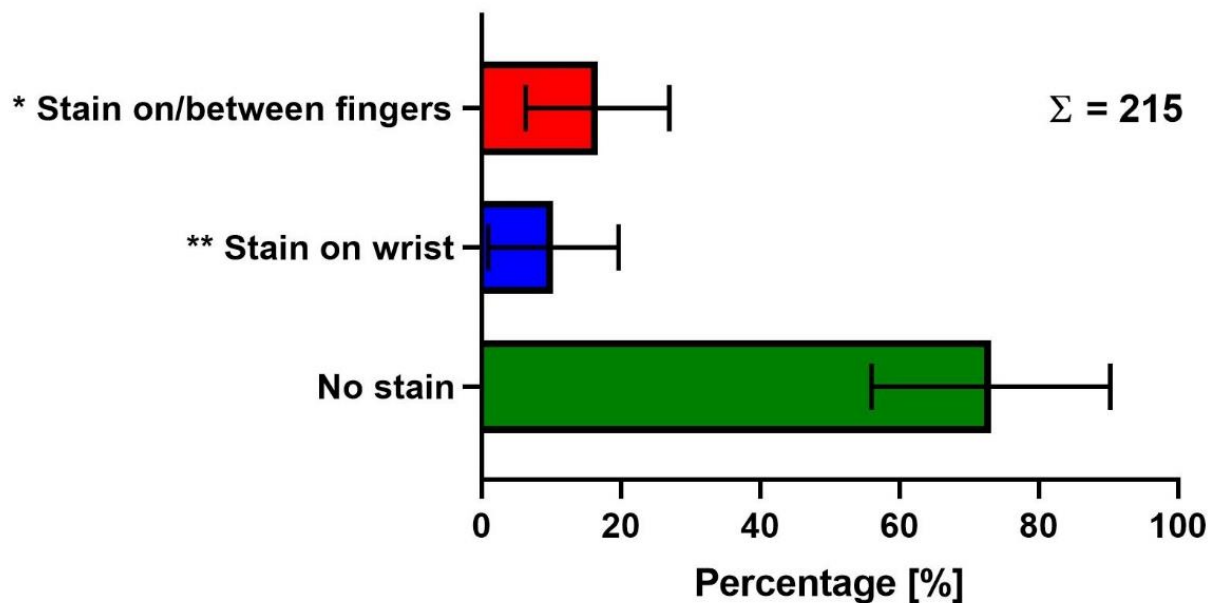

Study

- Data collected on seven different dates
- Over 200 different researchers (BSL-1 to BSL-3)
- Unopened, non-expired boxes of nitrile exam gloves used
- Exercise involved donning gloves, rubbing fluorescent dye, and removing gloves after a maximum of two minutes

Analysis

- Removal technique vs. leak?
- Gloves were not used to complete a task/experiment
- Error bars represent the mean with standard deviation

Glove Removal Exercise

* *Stain on/between fingers = due to glove failure*

** *Stain on wrist = due to human error*
