Wear a mask or face covering in public settings

Public settings include all outdoor spaces and any interior space that can reasonably be expected to be shared (e.g., common work areas, hallways, and restrooms).

In a laboratory, a surgical mask is required at all times and should be removed prior to exiting the laboratory.

Wash hands or use hand sanitizer before and after applying and removing face covering

Your mouth and nose should be fully covered

Tie or secure the face covering to prevent slipping

Remove face covering if you have difficulty breathing

By covering your mouth and nose with a face covering, you are less likely to transmit the virus to others if you are asymptomatic or have unrecognized, early COVID-19 symptoms. Face coverings are not a replacement for social distancing and hand hygiene.

More information about using face coverings:
