Operator Requirements and Reducing Exposures

- Only a properly credentialed individual may operate an x-ray machine for human use. Studies must be performed on the order of a physician or authorized provider.
- Operators of x-ray equipment must either stand behind a lead barrier or wear a lead apron during x-ray exposures. Maximize the distance from the x-ray tube and patient during x-ray exposures. Never direct the x-ray tube toward the operator or the control booth during exposures.
- Pay attention to postings and lighted signs and heed warnings.

Dose Reduction

- Perform a visual check of any lead aprons or other shields worn before every use.
- Holding patients should be rare. When necessary, wear lead gloves in addition to a lead apron.
- Always strive to reduce patient doses while optimizing image quality.
- Avoid unnecessary scans and use the lowest optimal radiation dose for necessary studies.

Dosimetry

- To request dosimetry badges, please visit: https://ehs.yale.edu/sites/default/files/files/radiation-service-monitoring.pdf
- Wear your badge whenever using x-ray equipment. Wear badge at the collar outside of lead apron.
- Store badge on site and away from radiation when not being used.
- Never share badges or intentionally expose badges to radiation.
- Return badges in a timely manner at the end of the wear period.

Security

- Turn off x-ray equipment when not in use. Always secure keys when x-ray unit is not in use.
- Do not post passwords near x-ray control panels and do not leave keys with equipment.
- Only trained and authorized users should have access to the unit keys.

Unit Malfunction

- If the x-ray unit appears to malfunction, remove it from service immediately.
- Contact your supervisor and the service representative as soon as possible.
- Make certain other users are aware that the unit is out of service and notify Radiation Safety at the EHS main line 203-785-3550.

New Use or Termination of Use

- Contact EHS prior to purchase, relocation, transfer, donation, or disposal of an x-ray unit to ensure all work is handled correctly and in accordance with Connecticut Department of Energy and Environmental Protection regulations. Ionel Hau is the EHS contact for X-ray Safety matters – ionel.hau@yale.edu

Emergency Procedures

- Contact the Yale Health Radiologist for any x-ray equipment related emergencies.
- Call the EHS emergency line at 203-785-3555 any time for all x-ray related emergencies.

Personal Radiation Dosimetry

Personal radiation dosimetry is worn by users of radioactive materials and x-ray equipment operators. Individuals assigned personal dosimetry must wear their dosimeters when working with radiation to track and monitor external radiation exposures and ensure that exposures are being kept As Low As Reasonably Achievable (ALARA).

Dosimeters are a passive device used to measure radiation exposure. They do not offer active protection from radiation. Dosimeters provide the legal dose of record for each assigned user. Once a dosimeter is assigned, it must be tracked, and a dose assigned. Therefore, it is crucial that all assigned dosimeters are returned in a timely manner after their wear period ends. Please see below for important information on wear periods, dosimetry delivery from EHS, return of old dosimetry to EHS and requesting a new personal dosimeter.

<table>
<thead>
<tr>
<th>Dosimetry Wear Periods</th>
<th>Most dosimetry is distributed on a quarterly frequency, on the first working day of the new quarter. The normal quarterly wear period schedule is shown below:</th>
</tr>
</thead>
</table>
|                        | * Wear period 1 (Q1): January 1st to March 31st  
|                        | * Wear period 2 (Q2): April 1st to June 30th  
|                        | * Wear period 3 (Q3): July 1st to September 30th  
|                        | * Wear period 4 (Q4): October 1st to December 31st. |

Some dosimetry is assigned on a monthly wear period. Monthly dosimeters are distributed on the first working day of each month.

The end date of the wear period shown on the dosimeter does not mean the dosimeter no longer functions after that date. However, dosimeters should only be worn beyond the wear period end-date until the proper exchange for new dosimetry has occurred.

| Delivery of Dosimeters by EHS | On the first working day of the new wear period, dosimeters are sent by EHS through campus mail to departmental mailrooms - not directly to individual labs. If you cannot locate your new dosimeter, please check with your departmental administrator who collects the mail or in your designated mailroom prior to contacting EHS. |

| Return of Dosimetry to EHS | Once you have received dosimetry for the new wear period, it is important to send back to EHS the old dosimetry from the previous wear period to allow for timely processing. Timely processing of dosimetry is critical to catching above ALARA level exposures (≥ 100 mrem whole-body, or ≥ 1000 mrem extremity). All dosimetry issued, even unused dosimeters, must be returned to EHS. |

| To return: | |
| 1. Collect old dosimeters and place them in the return bag that is provided in the new bag of dosimeters. This should be done the same day that you receive the new dosimeters (or close to this as possible) so that processing times are not delayed;  
2. Drop off the return bag at a campus mailroom to be returned to EHS by campus mail; OR drop off in person at 135 College Street, Suite 100 during normal business hours (8:30 am–5:00 pm, Monday–Friday). |

| Requesting a Dosimeter from EHS | Dosimetry may be obtained following completion of the required radiation safety training programs and by submitting a Radiation Monitoring Service Form & Guidelines: [https://ehs.yale.edu/sites/default/files/files/radiation-service-monitoring.pdf](https://ehs.yale.edu/sites/default/files/files/radiation-service-monitoring.pdf) |
