

REGISTRATION FORM FOR THE USE OF

TRANSGENIC DROSOPHILA MELANOGASTER CREATED BY OTHER GROUPS

Principal Investigator	Date
Locations used for this work (Please list all rooms)	

Notes:

If you are creating your own transgenic *Drosophila*, please do not use this form and fill out the recombinant or synthetic nucleic acid molecules “animal” section on your EHS Integrator registration and include the hosts, plasmids and inserted nucleic acids used to generate them.

Why is this registration required?

Generating or working with existing transgenic lines in cell culture is exempt from the NIH Guidelines unless high risk plasmids or nucleic acids are utilized. However, the generation or USE of transgenic flies are covered by the NIH Guidelines. The NIH has not extended the exemptions for the use of purchased or transferred transgenic rodents to *Drosophila* to date, so the use of transgenic flies are still covered by the NIH Guidelines (Section III-D-4-a), and must be registered with the Yale Biological Safety Committee.

Please answers the following statements in order to describe your work with transgenic drosophila.	YES	NO	N/A
The laboratory is PURCHASING or OBTAINING transgenic drosophila.			
The laboratory is BREEDING transgenic drosophila.			
The laboratory is performing other research involving transgenic drosophila (If yes, please describe below)			

Please describe your research in one paragraph:
